sendanywhere

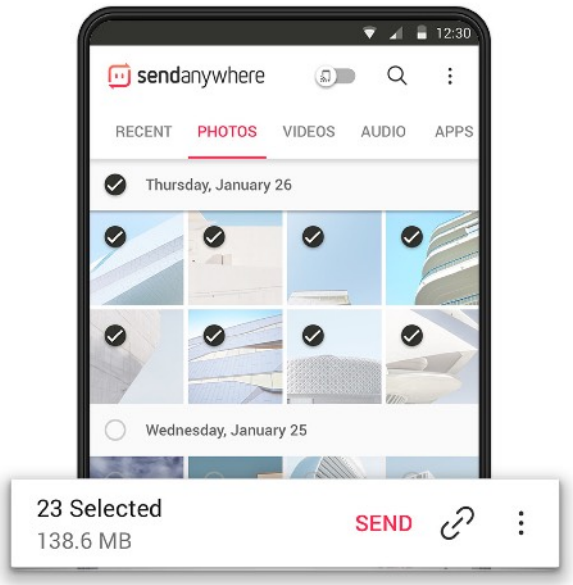
Mobile App

Android / iOS

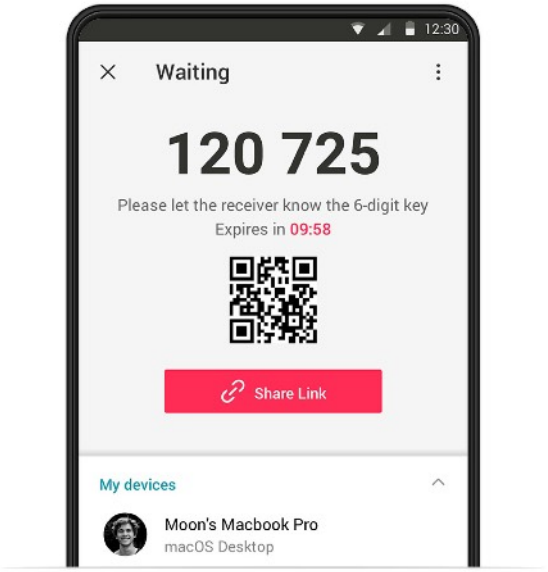
Android iOS

Transfer files easily with 6-digit key



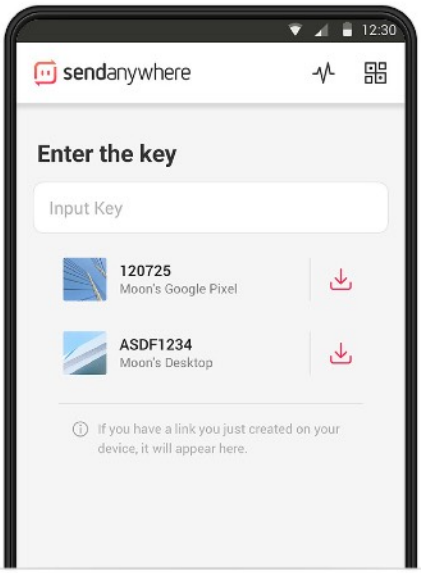
1

Select files and tap Send in Send menu.



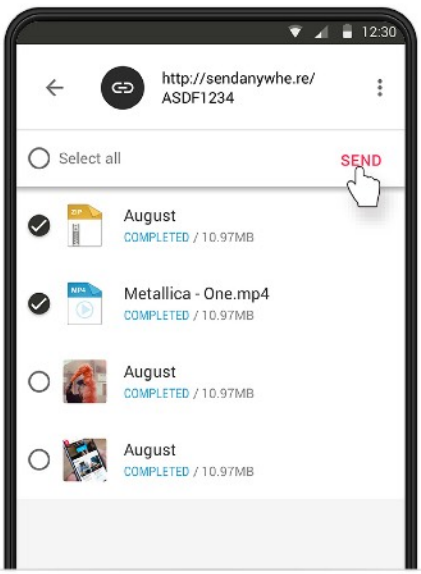
2

Create 6-digit key that uses only one time in 10 minutes.



3

The download will start once a receiver enters 6-digit key in Receive menu. You cannot continue to download paused files because of directly transferring files in real time.



4

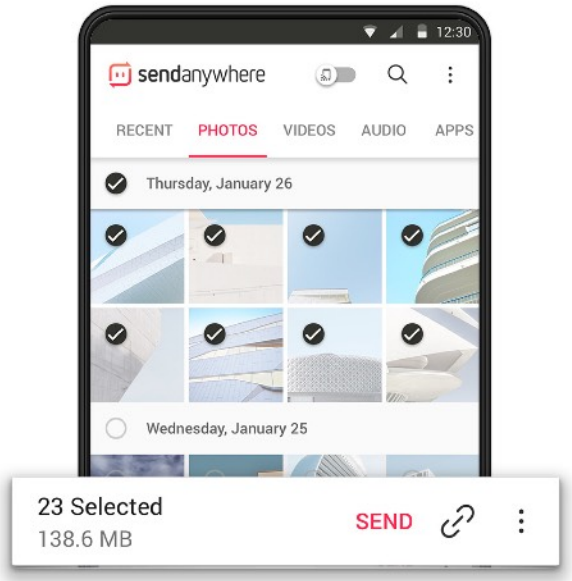
When you select a file from a list in History menu, Send button appears. Click Send to re-send files.

* This is only possible when the file is saved in the designated download folder.

* iOS will be updated soon.

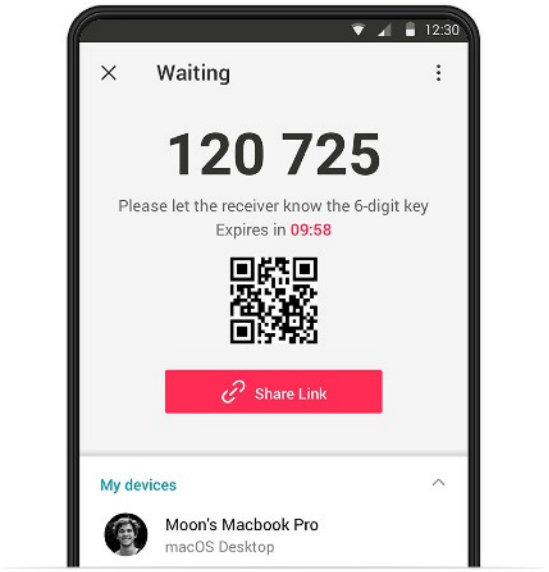
Android iOS

Share files with share-link to multiple people



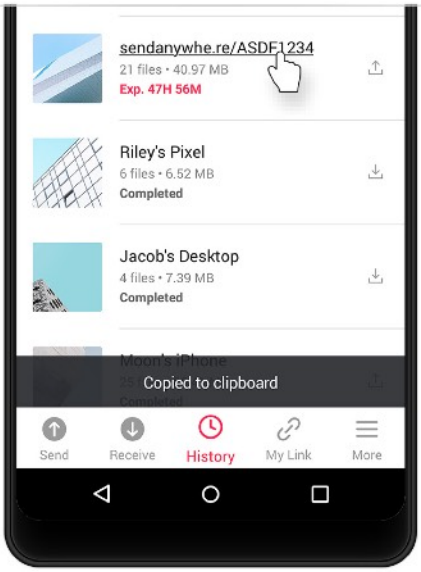
1

Select files and tap Send in Send menu.



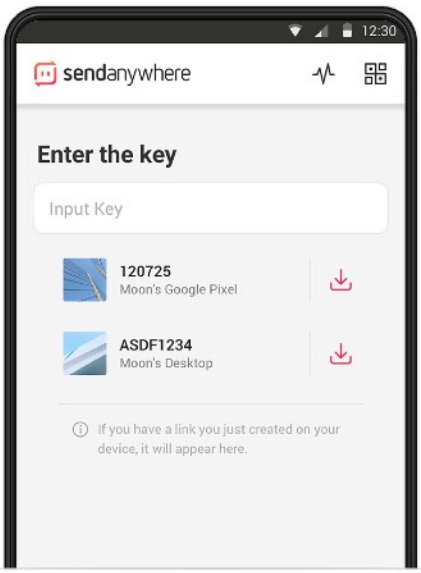
2

Tap Share Link to create a share-link valid for 48 hours.



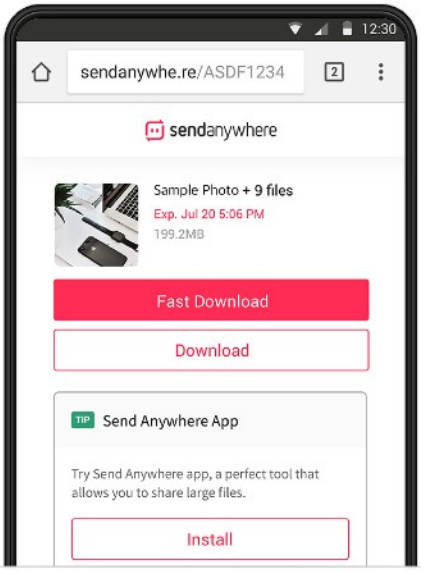
3

Copy the share-link and send to your friends! It can be downloaded without count-limits.



4

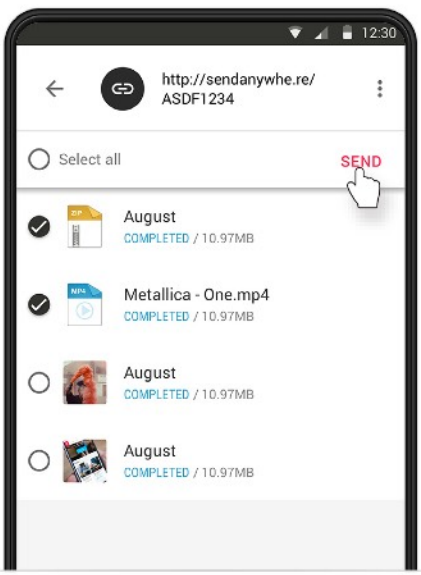
The download will start once a receiver enters the entire share-link in Receive menu.



5

Even if a receiver does not install the app, they can download files by entering the link into the address bar of web browser.

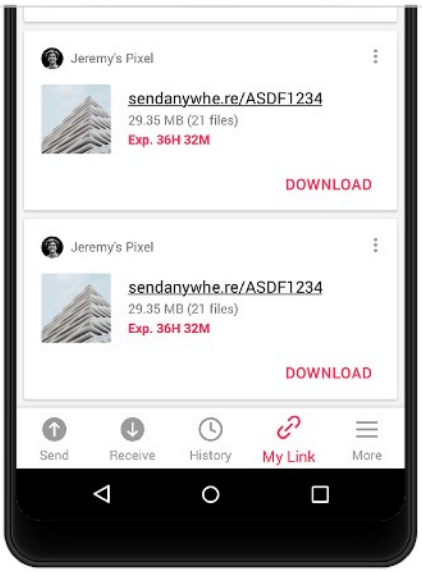
* You may not download files in a mobile web browser if the file format or codec that you want to download is not supported by the OS.



6

When you select a file from a list in History menu, Send button appears. Click Send to re-send files.

* This is only possible when the file is saved in the designated download folder.
* iOS will be updated soon.



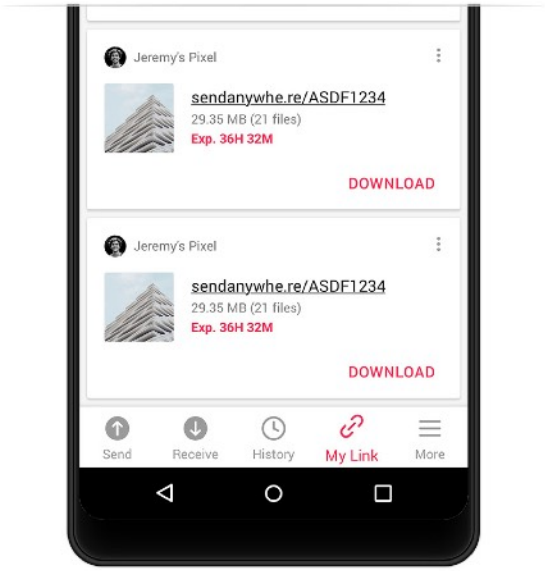
7

All share-links that you created on any device signed in the same account are displayed in My Link and can be managed.

* Free user can create 10GB of My Link and PLUS user can create My Link up to 1TB.

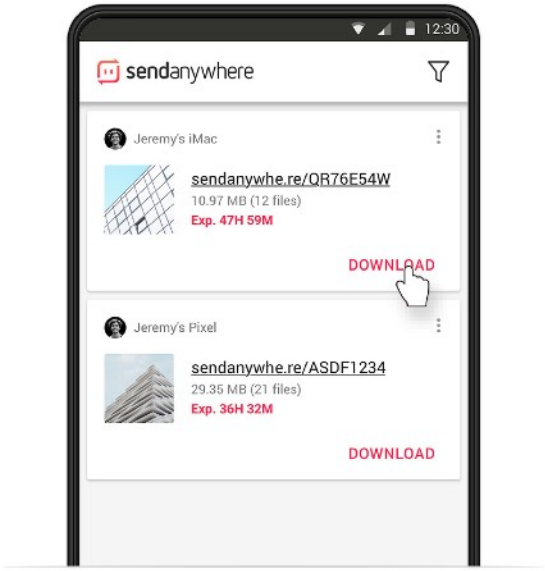
Android iOS

Managing share-links in My Link



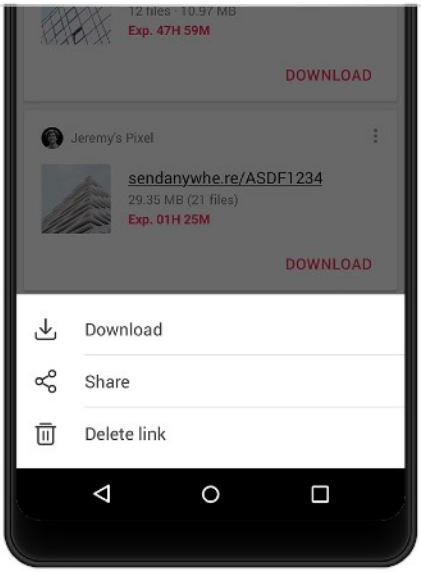
1

All share-links that you created on any device signed in the same account are displayed in My Link and can be managed.



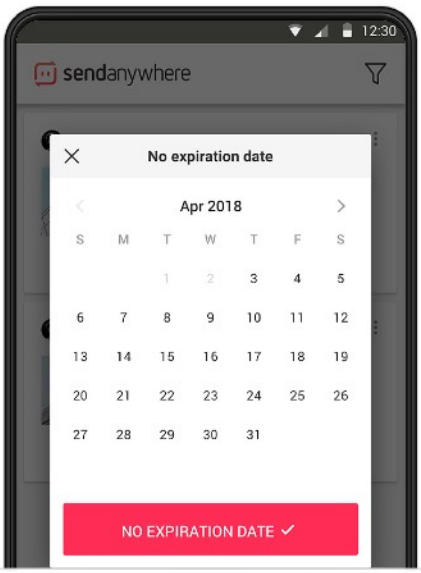
2

Download files from the share-link.



3

Delete My Link that you no longer use for free up space.



4

Share-links are valid for 48 hours as default, you can set expiration date as you want anytime if you subscribe Send Anywhere PLUS.

5

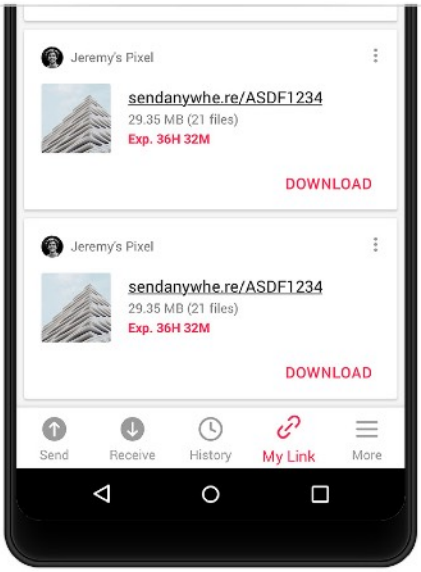
All files get deleted from the server once it expires for security reasons. After then it cannot retrieve anymore.

* Please download files in advance before it expires.

Android iOS

Set expiration date of My Link

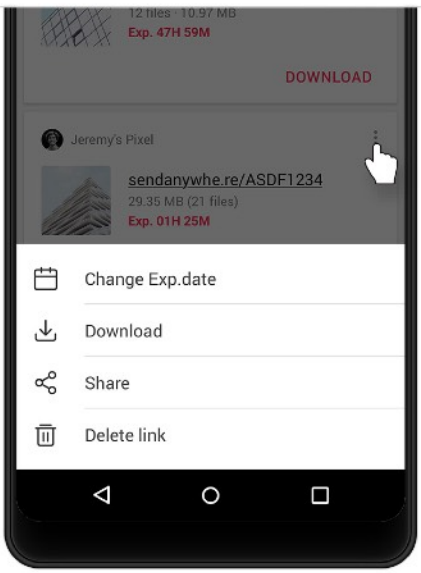
Only for **Send Anywhere PLUS** user



1

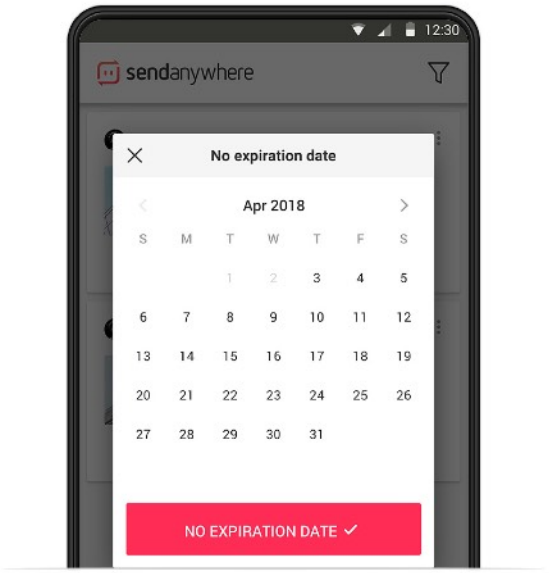
Set expiration date freely as you want in My Link menu.

* When you create a share-link, set expiration date is 7 days as default.



2

Go to My Link and tap ⋮ More button to the right of the My Link you want to change.



3

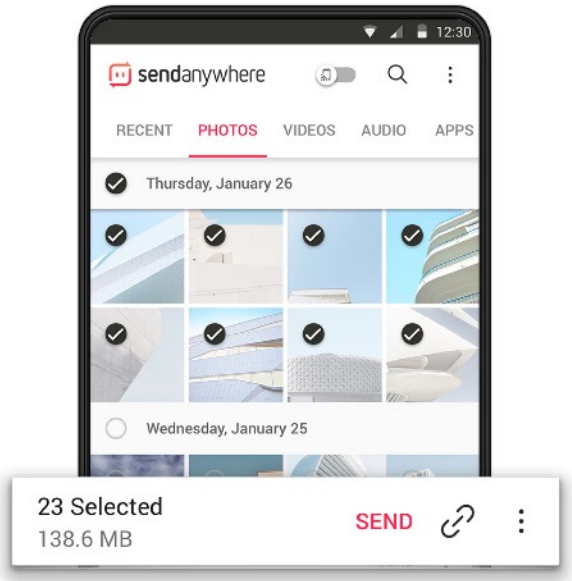
Tap the Change Exp.date and set an expiration date if you want.

* If you tap ‘No expiration date’,
you can create a My Link without limit.

Android iOS

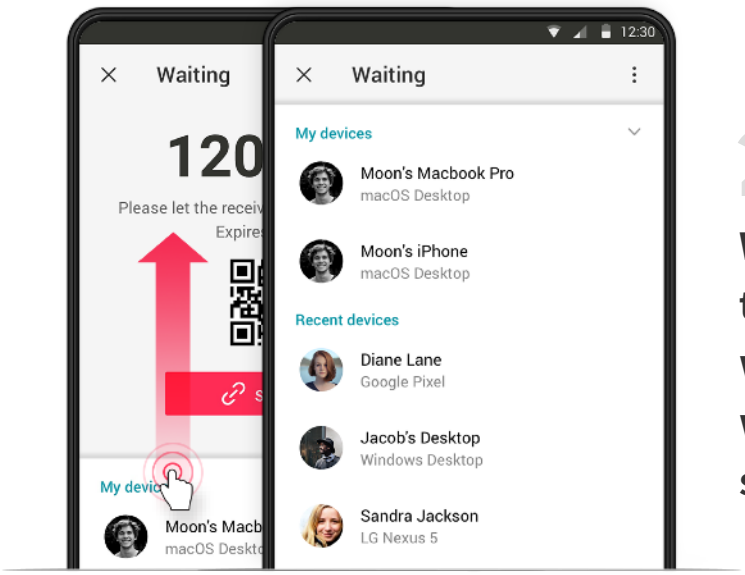
Transfer files to Device Directly

You can send files directly without a number key or Share-link when you select a device in the device list.



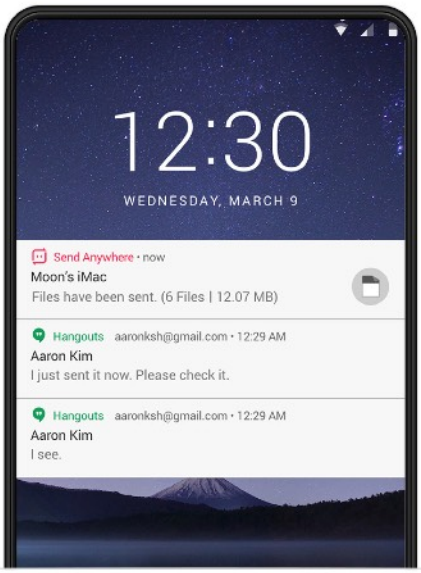
1

Click files you want to send and tap Send at the bottom.



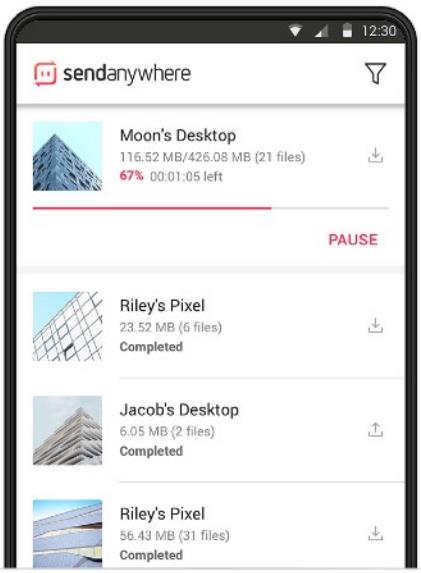
2

When you select a device in the bottom of waiting page, files will be transferred directly. If you want view all of device's list, swipe up the list.



3

A notification will be sent to the selected device and tap the notification and Receive in the transfer card to download files.



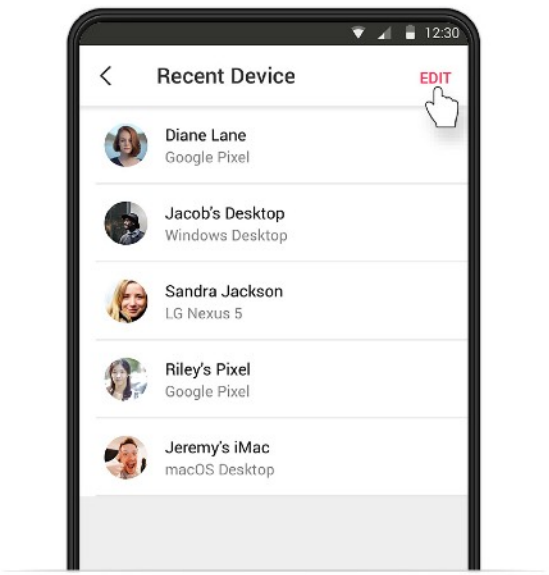
4

If the sender stops the upload or the receiver cancels the download, they will no longer be able to receive it because of directly transferring files in real time.

5

Files sent to a device are kept on the server for up to 48 hours.

* When someone receives the file, it is deleted from the server immediately and will be deleted from the server after 48 hours, even if the file is not received.



6

You can edit or remove device list in Setting of app.

Android

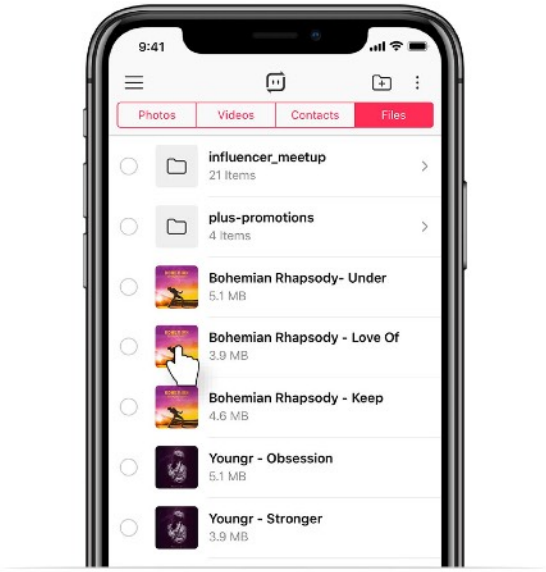
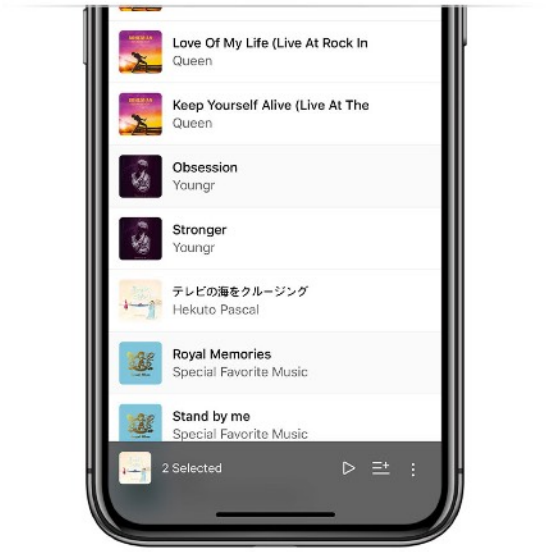
iOS

Play music with Send Anywhere



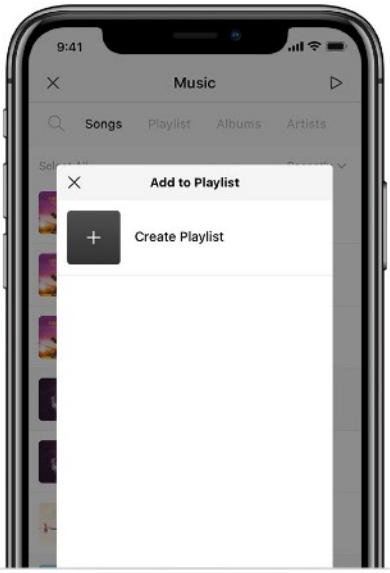
1

Received music files are saved in File Tab. And If you tap the thumbnail or file name of a music file on Files tab, the music player opens.



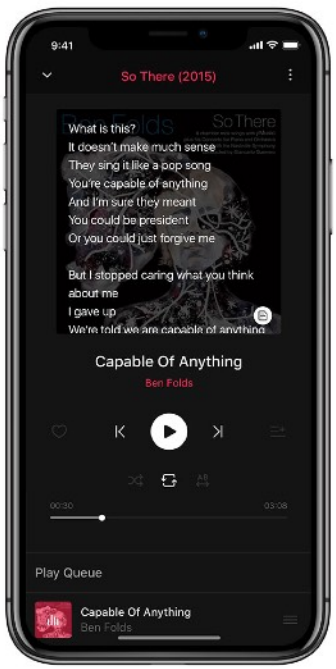
2

While the music is selected, tap the bottom Play button to play the song. And also you can play multiple songs.



3

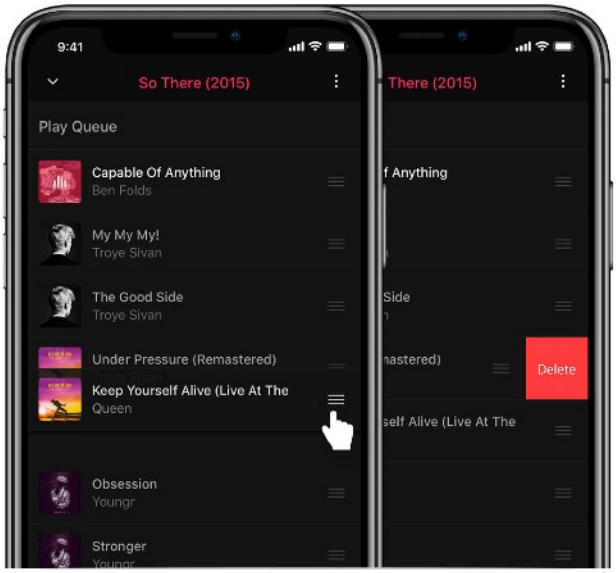
To create playlist, select songs you want from Songs list and tap the add playlist icon at the bottom.



4

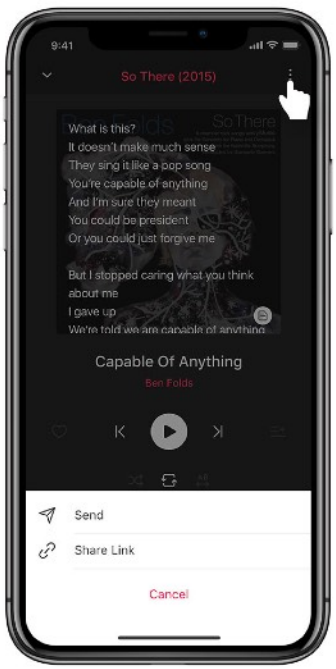
If you tap the play screen, you can see the lyrics. And you can change the play options via the button at the bottom of screen.

* The lyric is only can see when the music file contains lyrics.



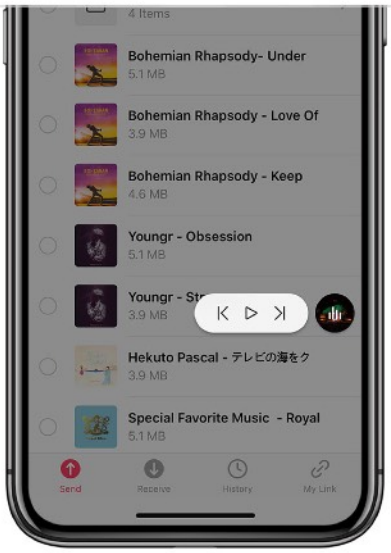
5

You can edit the play queue that is currently playing by swiping up the play screen.



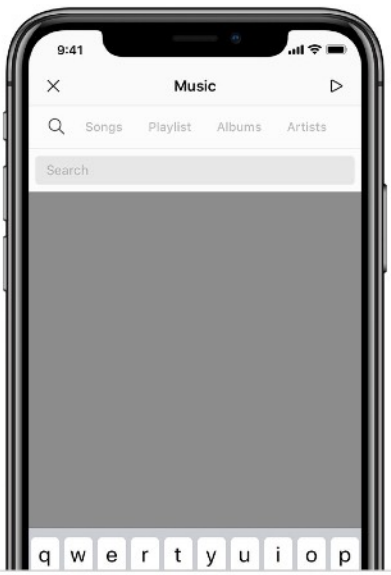
6

Tap 3 dots icon at the top right corner of the play screen to send music you listening.



7

Even if closing the music player, it turns into a mini player and you can listen and play previous/next song and pause to music while you transfer files.



8

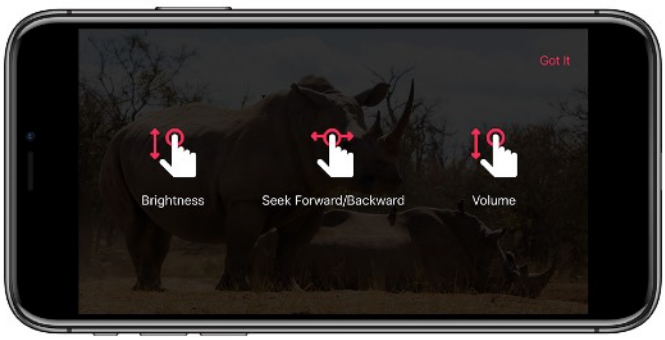
In the music player, tap the Magnifier icon to find music or artists.

iOS

Play video with Send Anywhere

1

Received videos can be played in the app.

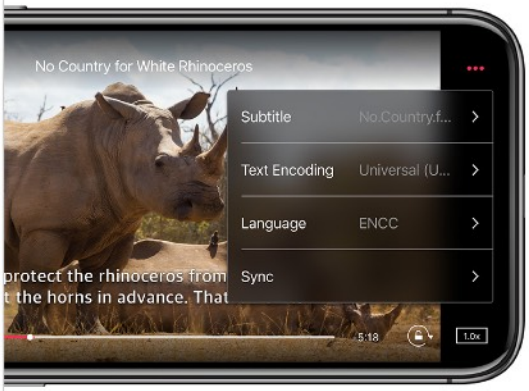


2

While being played, screens and sounds can be easily adjusted.

3

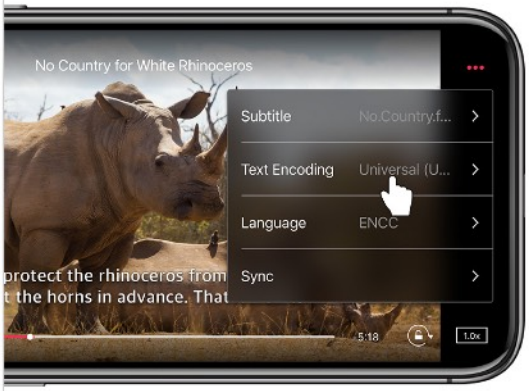
Tap 1.0x to change the play speed.



4

Play with subtitles. You can also set it as you want.

* It is only played when a name of subtitle file is same as video file's name.



5

If the subtitle looks broken, use Text Encoding.

6

You can also sync the subtitle.

7

You can only play video file formats supported by the iOS or the Send Anywhere video player.

Learn more the supported file formats

* All file formats or codecs that are not supported by iOS are saved in the 'File' tab. For that formats, please use a other video player app.

sendanywhere
